

Polycellulose Cleanroom Wipe

CelluClean Polycellulose Wipers are made from a blend on 45% polyester and 55% cellulose fibers. No chemical binders are necessary to combine the two fibers because a special fiber entanglement process uses water streams to mesh the components.

Cellulose, a natural fiber, is highly absorbent. When combined with the dependability of a synthetic fiber, a strong, low particle wiper is created.

Class 100 **CelluClean** Wipers are an economical alternative for general purpose polishing and spill clean up. These versatile wipes are resistant to solvents and cleaning agents.

Wipers are available in two textures: smooth for general and critical environment use, or creped for specialty applications.

Smooth wipers are laundered in a class 100 environment, and double bagged. Creped wipers are packaged in polybags.

Applications: Highly absorbent. Excellent for spill clean-up and general cleaning in cleanroom, microelectronic, laboratory, and industrial maintenance.
